**Course Objective:** To make students aware of industrial engineering concepts of work study and measurement, quality control and reliability etc.

Syllabus		Contact Hours
<b>Unit-1</b>	<b>Introduction:</b> Introduction, Definition and objectives of Industrial Engineering, Scope of Industrial Engineering, Production systems and their classifications; Productivity-Total and partial productivity, Reasons and remedy for poor productivity.	<b>6</b>
<b>Unit-2</b>	<b>Job analysis and Work Measurement Systems</b> Work System Design: Taylor's scientific management, Gilbreth's contributions; method study, micro-motion study, principles of motion economy; work measurement - stop watch time study, micro motion and memo motion, work sampling, standard data, PMTS; ergonomics; job evaluation, merit rating, incentive schemes, and wage administration; business process reengineering.	6
<b>Unit-3</b>	<b>Production Planning and Control</b> Types and characteristics of production systems, Objectives and functions of Production, Planning & Control, Routing, Scheduling and Operations scheduling, production scheduling, job shop scheduling problems, sequencing problems, scheduling tools and techniques, Loading, Dispatching and its sheets & Gantt charts.	8
<b>Unit-4</b>	<b>Quality Engineering</b> Quality concept and costs; statistical quality control, Concept of specification limits, statistical control limits, process capability, Process control and control charts for both attributes and variable data. Acceptance Sampling- Single and double sampling.	8
<b>Unit-5</b>	<b>Reliability and Maintenance</b> Reliability, availability and maintainability; distribution of failure and repair times; determination of MTBF and MTTR, reliability models; system reliability determination; Maintenance management and its objectives, Various types of Maintenance Planning, House Keeping, 5S concepts.	6
<b>Unit-6</b>	<b>Material Handling</b> Principles, functions, and objectives of Material Handling; Selection and classification of Material Handling Equipments; Relation of material handling with plant layout.	<b>8</b>
<b>Total</b>		<b>42</b>

#### Course Outcomes

CO1	Ability to understand the productivity and work study
CO2	Ability to apply plant layouts and understanding the applications of material handling equipment.
CO3	Ability to apply the concept of inventory and supply chain management.
CO4	An understanding of job evaluation and merit rating
CO5	Explain various operations management Techniques
CO6	Solve operations management and project management problems
