| Course code: Course Title | Course Structure |   |   | Pre-Requisite |
|---------------------------|------------------|---|---|---------------|
| SE329: Methods for Data   | L                | T | P | NII           |
| Analysis                  | 3                | 0 | 2 | NIL           |

Course Objective: To make one understand the methods for data preparation and analysis.

| S. NO | Course Outcomes (CO)   |
|-------|--|
| CO1   | Understand the principles and importance of data analysis, including effective data collection strategies and mining software repositories.            |
| CO2   | Identify different types of variables, and classify data using appropriate measurement scales.   |
| CO3   | Apply descriptive statistics techniques to summarize data and inferential statistics methods to draw meaningful conclusions.                           |
| CO4   | Implement data preparation techniques such as feature selection, and feature extraction in order to have quality data for model development.           |
| CO5   | Apply various data analysis techniques, including statistical and machine learning methods, to analyze data effectively and solve real-world problems. |

| S. NO  | Contents  | Contact<br>Hours |
|--------|---|------------------|
| UNIT 1 | <b>Introduction:</b> Data Collection Strategies, Data Collection from Repositories, Mining Data from Software Repositories: Configuration Management Systems, Importance of Mining Software Repositories. Common Types of Software Repositories, Version Control Systems, Bug Tracking Systems, Open Source Repositories.   | 6                |
| UNIT 2 | <b>Types of Variables:</b> Independent and Dependent Variables, Categorical vs Numerical, Nominal Variables, Ordinal Variables, Interval Variables, Ratio Variables; Identifying the dependent and independent variables, Confidence levels.  | 8                |
| UNIT 3 | <b>Data Preparation-I:</b> Descriptive Statistics: Summarizing and describing a collection of data, Univariate and bivariate analysis, Mean, mode and standard deviation, Percentages and Ratios, Histograms, Identifying randomness and uncertainty in data inferential Statistics: Drawing inference from data, Modeling assumptions, Identifying Patterns, Regression analysis, T-test, Analysis of Variance, Correlations, Chi-square Measures of central tendency, measures of dispersion, data distribution, histogram analysis, normalization, outlier analysis, correlation analysis. | 6                |
| UNIT 4 | <b>Data Preparation-II</b> : Attribute Reduction Methods: Univariate Analysis, Correlation-based Feature Selection, Attribute Extraction: Principal Component Analysis.   | 6                |
| UNIT 5 | <b>Data Analysis:</b> Data Analysis Techniques: Introduction to Statistical and Machine Learning techniques, Tools for analyzing Data.  | 8                |
| UNIT 6 | Applications: Case studies for data preparation and analysis.   | 8                |
|        | TOTAL   | 42               |
